

Food gas equipments

Bleed valve

Product description

The purge valve is installed at the end of a manifold to purge the residual pressure in the line between the cylinders and the manifold itself and for maintenance or replacement of supply lines. The valve is supplied with a gas-specific threaded connector and can be connected to a drain using the Ø 12 mm weld-on pipe connector.

Components

The valve body is made of CW617N brass with blue plastic handwheel.

EPDM seal ring.

PTFE anti-extrusion ring.

Protective cap made of RAL 5002, color PA6.
